

Jorge Loreto

DATA SCIENTIST · BUSINESS INTELLIGENCE & ANALYTICS

jloreto9@gmail.com · +1 (849) 286-2637 · Santo Domingo, RD · LinkedIn · GitHub

PROFESSIONAL SUMMARY

Economist with **over 10 years analyzing financial and commercial data** — first in international trade operations, then formalizing that transition into data science applied to retail. The conclusion was always the same: the best decisions are built on models, not intuition. Today I lead *Business Intelligence and Management Control* at Grupo Ramos — the largest retail chain in the Dominican Republic (90+ stores) — combining advanced statistical modeling, pipeline automation, and a solid corporate finance foundation (FMVA® · CFI) to turn complex data into business decisions. Trilingual (ES / EN / FR).

PROFESSIONAL EXPERIENCE

Head of Business Intelligence and Financial Management Control

GRUPO RAMOS · SIRENA / SIRENA MARKET / APREZIO

- Led a multidisciplinary analyst team covering execution, logistics, commercial, and inventory across **+90 stores in 17 provinces**.
- Drove the analytical roadmap and defined **strategic KPIs** reported to C-level: sales, margin, shelf availability (FEG%), Fill Rate, and inventory turnover.
- Built integrated **financial projection models** (sales, margin, inventory) in Python and SQL, sourcing from SAP BW and BigQuery.
- Served as Business Lead for the **BigQuery + Looker strategic POC**, bridging technical and operational teams for cloud analytics adoption.

Data Scientist — Financial Control

GRUPO RAMOS

- **Hierarchical forecasting** of sales and margin for +90 stores using Prophet, LSTM, and Monte Carlo simulations.
- **AF2026 budget distribution** via Iterative Proportional Fitting (IPF): end-to-end Python pipeline with mirror-store logic and assertion validation.
- **Causal impact analysis** of promotional non-execution vs. competitors: Difference-in-Differences with Synthetic Control; SQL optimization from ~20M to ~800K rows.
- **Store clustering model** for +90 stores by structural and financial profile (K-Means + PCA) for segmentation and budget target allocation.

- **Shelf availability analysis (FEG%)** and product substitution via Granger Causality — identification of non-substitutable SKUs.
- Automated pipeline **SAP BW** → **SQL Server** → **Power BI** via Python for daily load; reduced manual errors and data latency.
- Executive HTML dashboards with **custom Sankey diagrams** (vanilla JS) for P&L and Balance Sheet; qualitative KPI input via Power Apps.

FEATURED PROJECTS

RepubliCaraquistApp

GITHUB.COM/JLORETO9/REPUBLICARAQUISTAPP

- **Sports Analytics & Sabermetrics** web app for the LVBP (Venezuelan Professional Baseball League), focused on Leones del Caracas.

- Data ingestion pipeline from the **MLB Stats API** with play-by-play granularity and upsert logic into **Supabase (PostgreSQL)**.
- Interactive analytics frontend built with **Streamlit** — end-to-end: ingestion → database → visualization.

AUTOMATION & AI AGENTS

Personal AI Assistant Agent

- Conversational AI agent with persistent memory (PostgreSQL) deployed on Telegram, with tool access to Google Calendar, Gmail, Todoist, OpenWeatherMap, and Spotify.
- Orchestrated via n8n on self-managed infrastructure (Docker + Traefik, Hostinger KVM2). Model: GPT-4o-mini.

República Caraquista · Automated Content System

REPUBLICARAQUISTA.BLOGSPOT.COM

- End-to-end pipeline that scrapes news from multiple sources, deduplicates via semantic clustering, generates editorial posts with GPT-4o-mini in a defined editorial tone.
- Publishes to Blogger via API and distributes a daily newsletter to a Telegram channel with auto-pin. Infrastructure: n8n + Docker + Traefik on self-managed server.
