Jorge Loreto

DATA SCIENTIST · BUSINESS INTELLIGENCE & ANALYTICS

jloreto9@gmail.com · +1 (849) 286-2637 · Santo Domingo, RD · LinkedIn · GitHub

PROFESSIONAL SUMMARY

Economist with **10+ years of analyzing financial and commercial data** — first across international trade operations, then formalizing that transition into applied data science. The conclusion was always the same: the best decisions are built on models, not intuition. Today I lead *Business Intelligence & Management Control* at Grupo Ramos — Dominican Republic's largest retail chain (85 stores) — combining advanced statistical modeling, pipeline automation, and executive communication to turn complex data into business decisions. Trilingual (ES / EN / FR).

PROFESSIONAL EXPERIENCE

Business Intelligence and Financial Management Control Head

GRUPO RAMOS · SIRENA / SIRENA MARKET / APREZIO

- Led a multidisciplinary analyst team covering execution, logistics, commercial, and inventory across **85 stores in 17 provinces**.
- Drove the analytical roadmap and defined **strategic KPIs** reported to C-level: sales, margin, shelf availability (FEG%), Fill Rate, and inventory turnover.
- Built integrated **financial projection models** (sales, margin, inventory) in Python and SQL, sourcing from SAP BW and BigQuery.
- Served as Business Lead for the **BigQuery + Looker strategic POC**, bridging technical and operational teams for cloud analytics adoption.

Nov 2025 — Presente Santo Domingo, RD

Data Scientist — Financial Control

GRUPO RAMOS

- **Hierarchical forecasting** of sales and margin for 70+ stores using Prophet, LSTM, and Monte Carlo simulations.
- **AF2026 budget distribution** via Iterative Proportional Fitting (IPF): end-to-end Python pipeline with mirror-store logic and assertion validation.
- **Causal impact analysis** of promotional non-execution vs. competitors: Difference-in-Differences with Synthetic Control; SQL optimization from ~20M to ~800K rows.
- **Store clustering model** for 85 stores by structural and financial profile (K-Means + PCA) for segmentation and budget target allocation.

- **Shelf availability analysis (FEG%)** and product substitution via Granger Causality — identification of non-substitutable SKUs.
- Automated pipeline **SAP BW → SQL Server → Power BI** via Python for daily load; reduced manual errors and data latency.
- Executive HTML dashboards with **custom Sankey diagrams** (vanilla JS) for P&L and Balance Sheet; qualitative KPI input via Power Apps.

Python · Machine Learning · SQL · Time Series · Causal Inference · Feature Engineering · BigQuery · MLflow · Docker · Git · SQL Server · Postgres · Power BI · DAX · SAP BW · Looker · Tableau · Prophet · LSTM · Scikit-learn · HuggingFace · Pandas · NumPy · SciPy · Statsmodels · Streamlit · Power Automate · n8n · Supabase · REST APIs · PyTorch

Oct 2024 — Nov 2025 Santo Domingo, RD

Foreign Trade Specialist

DURAN INDUSTRIAL SRL

International commercial strategy, financial analysis of import/export operations, customs documentation, and contract negotiation.

May 2017 — Oct 2024 Baní, RD

TECHNICAL STACK

LANGUAGES & DATA

Python · SQL (T-SQL · BigQuery · Postgres) · Pandas · NumPy · SciPy · Excel (Advanced)

MACHINE LEARNING & AI

Scikit-learn · Prophet · LSTM · MLflow · Feature Engineering · Causal Inference · XGBoost · Random Forest · HuggingFace · LLMs · PyTorch · Monte Carlo · IPF

BI & VISUALIZATION

Power BI / DAX · Looker · Tableau · Matplotlib · Plotly · Streamlit · Custom Sankey (JS)

DEVOPS, APIS & AUTOMATION

Docker · Git / GitHub · REST APIs · Supabase · Power Automate · SAP BW · n8n · ETL / Pipelines

DOMAIN & BUSINESS

Retail Analytics · Sports Analytics · Sabermetrics · P&L · EBITDA · Budgeting · NPV · IRR · Payback · KPI Design

FEATURED PROJECTS

RepubliCaraquistApp

GITHUB.COM/JLORETO9/REPUBLICARAQUISTAPP

- **Sports Analytics & Sabermetrics** web app for the LVBP (Venezuelan Professional Baseball League), focused on Leones del Caracas.
- Data ingestion pipeline from the **MLB Stats API** with play-by-play granularity and upsert logic into **Supabase (PostgreSQL)**.
- Interactive analytics frontend built with **Streamlit** — end-to-end: ingestion → database → visualization.

Python | Streamlit | Supabase | REST APIs | PostgreSQL | Sports Analytics | Sabermetrics
